A Population-Based Screening Program versus Opportunistic Screening and Early Detection

Sancy Leachman, MD, PhD

Australian Skin and Skin Cancer Research Center

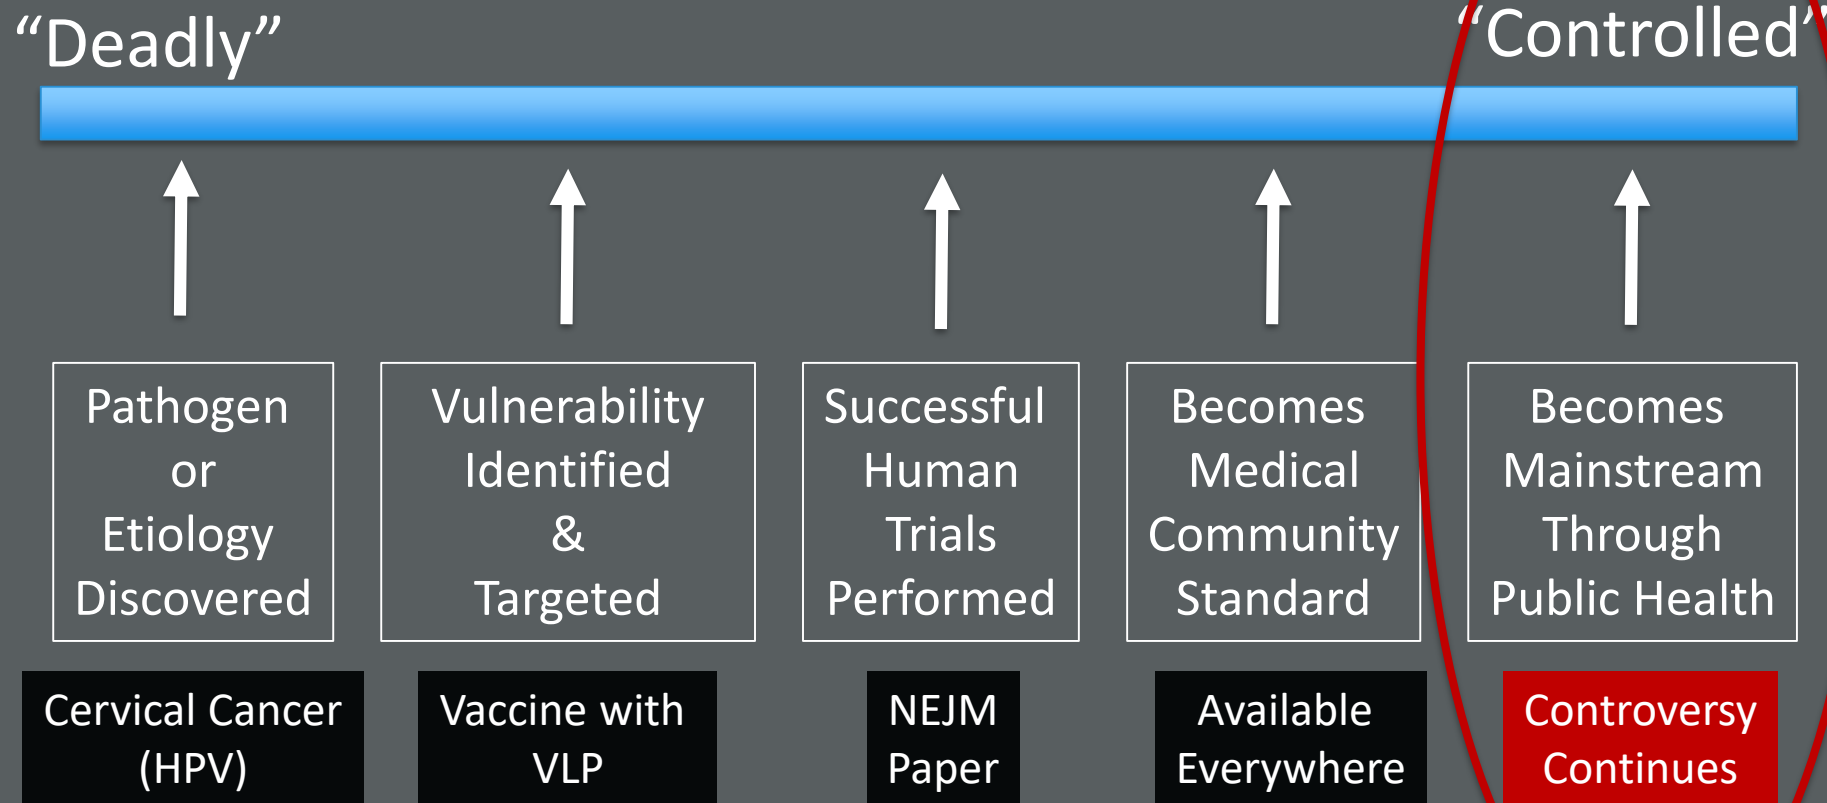

Melanoma Screening Summit

Monday, March 25, 2019

Disclosures

- **Potentially Discussed in Q&A:**
 - DermDetect (Mobile Dermoscopy)
 - MoleMapper – Free & Open Source Research Kit
- **Not Discussed:**
 - Myriad Genetics Laboratory
 - Castle Biosciences
 - OrLucent, Inc.
 - VeriSkin, Inc.
 - Merck

A Control Strategy That Works

Melanoma Can Be A Model for Applied Early Detection

The Vision (AKA BHAG): Seek Out & Destroy Every Lethal Melanoma

Early Detection Works for Melanoma

SEER 18 2008-2014, All Races, Both Sexes by SEER Summary Stage 2000

Skin awareness is inversely associated with lesion thickness and death.

Table 2. Independent predictors of death from melanoma in a multivariable model*

Variable	Hazard ratio (95% confidence interval)	<i>P</i> value
Solar elastosis		
Absent	1.0 (referent)	.009
Present	0.4 (0.2 to 0.8)	
Skin awareness		
No	1.0 (referent)	.022
Yes	0.5 (0.3 to 0.9)	
Breslow thickness		
1 mm increase	1.3 (1.2 to 1.4)	<.001
Anatomic site		
Other	1.0 (referent)	.001
Head/Neck	3.0 (1.5 to 6.0)	
Mitoses		
None	1.0 (referent)	<.001
Any	7.6 (2.5 to 23.1)	

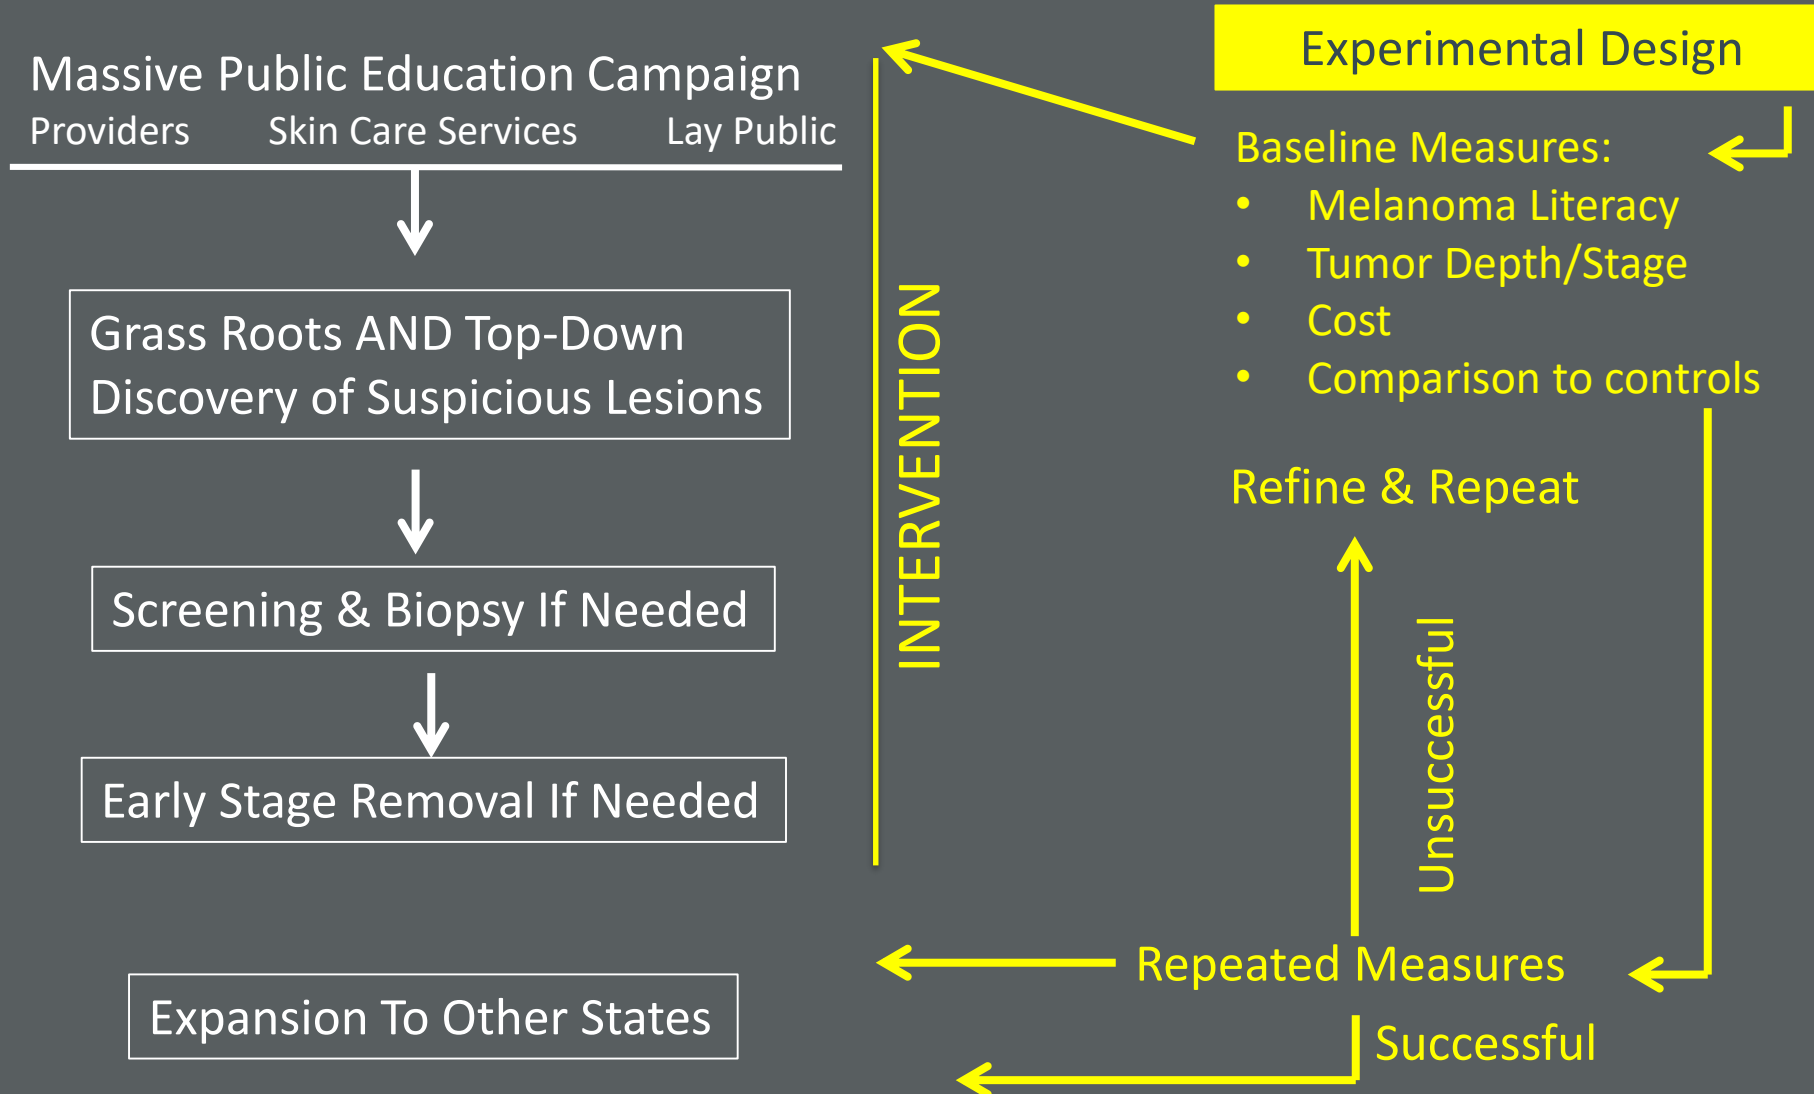

*This model was run with all the variables in Table 1. Only these variables remained statistically significant at a level <0.10 are shown.

The Concept: Oregon's Version of Schleswig-Holstein

Testing the hypothesis that melanoma mortality can be decreased by almost half through early detection/education.

The War Plan: A Statewide Population Sciences Experiment Overview!
